

Circular saw blade for aluminium and other non-ferrous metals

This premium circular saw blade for professional users is ideal for straight cuts in non-ferrous metals such as aluminium, copper or brass.

The special tooth geometry ensures minimal cutting forces and prevents high temperatures from developing, making excellent results possible when dry cutting non-ferrous metals. |The grade of carbide specially selected for machining aluminium ensures consistently outstanding cutting quality over a long service life. |The saw blade geometry is designed for sawing solid profiles. |Since less power is needed, a longer battery life is possible thanks to a very narrow cutting line in combination with the F-IRON Cut 57 AS.
